

Aftercare for Eyelash Extensions

When you leave StudioZen after your lash appointment, your lashes are ready to face real life. You can shower, swim and sweat immediately without fear. There are really only TWO rules to keep in mind when caring for your eyelash extensions:

1. Your lashes love water and hate oils. You can swim, shower and play with no fear but you need to be careful with products you use around your eyes. Around your eye area, avoid using cream cleansers or moisturizers. Pat your foundation around the orbital area. The oils in these types of products will breakdown the bond between the extension and your natural lashes and encourage your extensions to fall off more quickly than normal. Be sure to use the lash shampoo included in your aftercare kit daily to remove any oils that have accumulated from your skin and the environment.
2. Your lashes will thrive on neglect. Wash your lashes daily with lash shampoo then leave them alone! The more you touch, brush and fidget with your lashes, the quicker they will fall off.
